A Quick Intro to Brushes Add-ons The Photoshop Suite offers a great assortment of brushes and brushesets, the latter being a collection of several brushes. (See Make a Brusheset.) Adobe gives you five free brushes to get you started: these are the Paint Brush, Pencil Brush, Pencil Sketch Brush, Stylized Pencil Brush, and the Palm-Size Sketch Brush. Many more brushes are available in the Photoshop Silver Collection, which is also available as a third-party product from both Adobe and Synaptic Enterprises. These brushes provide excellent drawing-style effects and are good for use in retouching. The Brush Library includes a collection of over 200 brushes by different artists, grouped into a variety of categories. These can be grouped into tags, such as Graphic Design, Photo, and the like. You can also sort them by name or download them automatically. The Text Brush (available in the Photoshop 9 Suite) allows you to apply various effects and styles to text. As with the Paint Brush, the Brush Library and Text Brush are available as both a free add-on and as a 3rd-party add-on. EPS (Encapsulated PostScript) files are the preferred file format for creating brushes. Open a new Photoshop document, then open a graphics program or an image you'd like to paint with a brush in it. Choose File > Open and find your brush. Be sure to give it a reasonably descriptive name so you can easily find it later. If you are working in InDesign or Quark, you can save your brush as an EPS file and open it in Photoshop, but this will cause the drawing to be loaded into Photoshop as a Smart Object. Smart Objects are drawings, paths, or shapes that you edit, then save and load again as normal. Using a Smart Object is much faster than using a real file, but it's not the same as opening the file in Photoshop. To open a Smart Object in Photoshop, choose Edit > Smart Objects > Edit (single-click). Then you'll see a dialog box like the one in the image, where you can name the image, choose a brush preset, and apply any special options you'd like. If you want to close the editable Smart Object so you can make changes, press Cancel in the dialog box. 6.
